MRWA Supplement to Austroads Guide to Road Design - Part 1
Supplements to the Austroads guide to road design (AGRD)
VicRoads uses the Austroads Guides as a key reference, in conjunction with supplementary information, to ensure national consistency and standardisation for all road work. The Austroads Guides to Road Design are available on the Austroads website (External link).

Publications | Austroads
Lane widths at intersections are detailed in the Guide to Road Design Part 4: Intersections and Crossings: General (Austroads 2009b). Table 4.3 provides guidance for traffic lane widths on urban arterial roads and Table 4.4 provides traffic lane widths and shoulder widths for urban freeways.
Austroads Guide to Road Design Part 5 Supplement
Main Roads are responsible for delivering and management of a
safe and efficient main road network in Western Australia.
Representing one of the world's most expansive road networks,
we are committed to working cooperatively and productively
across all levels of government, to ensure our road network
meets the needs of the community, industry and stakeholders.

Austroads Guide To Road Design
The Austroads Guide to Road Design is intended to provide
designers with a framework that promotes efficiency in design
and construction, economy, and both consistency and safety for
road users. The guide moves away from rigid design limits as the
basis for achieving these goals, and promotes the concept of
‘context-sensitive design’.

Guide to Road Design - Main Roads Western Australia
Austroads is based in Sydney and funded by the federal
Australian government. [1] [2] Operations of Austroads are
primarily administrative, with all research and engineering work
contracted out, such as to produce the Australian standards for
construction, planning and design in roads.

Road design : VicRoads
The Austroads Guide to Road Design provides Normal Design Domain criteria suitable for new roads (greenfield sites). In most cases, the same criteria that is used for greenfield sites should also be used for modifications and upgrades to existing roads (brownfield sites).

**MRWA Supplement to Austroads Guide to Road Design - Part 6**
The philosophy and principles set out in the suite of Austroads Guides, and Main Roads Supplementary Information, underpin the creation of a successful, site-specific design solution. Designers choose the features of the road and dimensions of its elements based on technical guides, calculations and their own experience and judgement.

**Publications | Austroads**
Austroads has released the Guide to Road Design, Part 3: Geometric Design and all road agencies across Australasia have agreed to adopt the Austroads guides to provide a level of consistency and harmonisation across all jurisdictions.

**VicRoads Supplement to Austroads Guide to Road Design**
Guide to Road Design Part 4A: Unsignalised and Signalised Intersections provides road designers and other practitioners with guidance on the detailed geometric design of all at-grade intersections (excluding roundabouts). This Part contains information for the design of signalised and unsignalised intersections.

**AGRD06-10 | Austroads**
Guide to Road Design Part 3: Geometric Design provides road designers and other practitioners with information about the geometric design of road alignments. Design parameters include: road classification; design speeds; design vehicles; alignment controls; cross-section components, including travel lanes, shoulders and verges; and provisions for public transport and cyclists.

**Guide to Road Design Part 3: Geometric Design**
In summary, the Austroads Guide to Road Design is the primary technical standard for road planning and design in Queensland.
Queensland variations are documented in the Road Planning and Design Manual, Volume 3: Guide to Road Design.

Guide to Road Design Part 6: Roadside Design, Safety and Barriers provides an introduction to roadside design and guidance on roadside safety and the selection and use of road safety barrier systems. Roadsides have to accommodate many features that support the road and the safe and efficient operation of traffic, and have to be designed with regard to environmental requirements.
